## **EXAMINER'S AMENDMENT & NOTICE OF ALLOWANCE**

### ***EXAMINER'S AMENDMENT***

An examiner's amendment to the record appears below :

The application has been amended as follows:

In claim 3, on line 17, "upper end of the lower" has been replaced with

-- upper end of a range of the lower --

### ***REASONS FOR ALLOWANCE***

1. The following is an examiner's statement of reasons for allowance: The prior art or record fails to teach or to fairly suggest a frequency generating system for a mobile radio transceiver operating in two radio frequency bands spaced apart from each other, comprising the novel feature of two mutually offset local-oscillator frequency bands, one being lower than the other, and wherein the higher local-oscillator frequency band is exclusively provided for converting the UPPER RECEIVE frequency band into the receive IF, that being single band utilization; and the lower local oscillator frequency band is provided both for converting the LOWER RECEIVE frequency band into the receive IF, and also for converting the transmit signal from an IF into an RF transmit frequency in the UPPER TRANSMIT frequency band and the LOWER TRANSMIT frequency band, that being triple band utilization; whereby the percentage frequency differences between the two mutually offset local oscillator frequency bands is of such a magnitude that both the lower and higher local-oscillator frequency bands

can be generated by a single voltage-controlled oscillator having a resonator which is electronically switched in the manner of band-switching .

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

**Damagaard** (US 6,766,178) teaches RF architecture for a cellular telephone.

**Pau** (US 6,754,508) teaches a multiband wireless transceiver.

**Gore** (US 6,484,038) teaches apparatus for generating a plurality of frequencies.

**Haruki** (US 4,246,539) teaches a synthesizing system for a transceiver.

**Higuchi** (US 6,725,019) teaches a multi-band radio terminal.
